sales@xetexinc.com

Our featured project this month has two 100% outside air rooftop units. Even though the footprint is as compact as some other “light commercial” manufacturers, we didn’t cut any corners on quality or accessibility. The air cooled refrigeration system is designed to an EER = 10.3 and a IEER = 14.1. With efficiencies this high, the customer was able to cash in on local utility rebates for an added bonus.

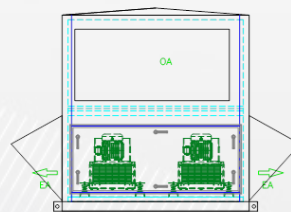

Unit highlights:

- Outdoor unit with 20ga painted acrylic exterior & 20ga galvanized interior
- 2” injected foam panels with thermal break construction
- 2” MERV 8 pre filter + 12” MERV 15 final filter
- LED interior service lights
- DX cooling coil with stainless steel drain pan
- 50 tons integral air cooled condensing
 - ◊ Direct drive ECM condensing fan
 - ◊ Variable speed lead compressor
- 600 MBH indirect fired gas heater
- Dual direct drive supply and exhaust fans with VFD
- Refrigeration safety controls by Xetex. Unit controls by BAS contractor.

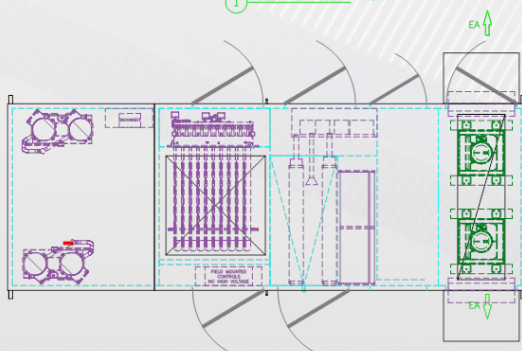

If you need assistance on any application you are currently working on please contact Xetex Sales at 612-724-3101 or email us at sales@xetexinc.com.
